

Touchy experience
Professional device for personal use

ARX-one is upgrade of our first successful product ARX1. it enables safe and comfortable way to enter your apartment, house or office. Like ARX1 it is designed more for private use. With capacitive buttons it is now even easier to use and you can control two doors with it.

Touch me !

With upgrade we made ARX1 even better and at this occasion it got a new name ARX-one. It has now two capacitive buttons and two output relays.

As its predecessor it is designed more for private use.

It has ID3 Biomodule inside, which is one of the best in the world.

It gives you a high level of security and high speed of recognition.

ARX-one has two output relays, so you can control up to two doors or you can open the door and trigger a silent alarm.

ARX one features

- Add/delete of users and administrators.
- Enroll up to 1000 users, first 3 of them are administrators.
- Activating up to two devices/doors with one reader.
- Possibility of adjusting the activation time of each relay.
- Connecting up to three readers on one internal device.
- Triggering a silent alarm in case of kidnapping.

Technical data

Power supply	110/230 V~ 2 output relays max. power on relay 40 V
Current consumption	min. 150 mA, max. 400 mA
Operating power	12 VDC
Operating temperature	-30°C - +80°C
Operating humidity	up to 90%
Exterior unit dimensions	79x79x62 mm
Interior unit dimensions	90x70x58 mm
Installation	Exterior unit on top of electrical mounting box 60mm, Interior unit on DIN rail inside fuse box (4 spaces)
Sensor type	ATMEL thermal fingerchip
Encryption type	256 bit rolling code
Memory type	Flash (fingerprints remain in the memory in case of power failure)
Identification level	professional (high level of minutiae)
Capacity	1000 fingerprints (100 users/administrators)
User interface	3 color LED, buzzer, 2 capacitive buttons
